LAZER COMMAND

MODEL LC-1

STANDARD FEATURES—OPTIONS

A 23" monitor, locking cash box, and dual coin mechanisms to prevent down time are all standard. The settings for operator adjustable time and coinage are easily set through the use of a unique switch located on the P.C.B. Another feature is the player option of choosing a more difficult field to maneuver through and keep player interest alive.

STURDY CONSTRUCTION—EASY ACCESS

The location tested throttle joystick controls are all new, Meadows designed for long life, and are virtually break-proof. The TV monitor is shock mounted using rubber grommets to safeguard against rough handling. The cabinet design incorporates a plywood front door for strength and it swings away to expose the TV monitor, coin box, coin mechs and P.C.B.'s for simple one spot access. The back door opens up to expose the unique flashing explosion lights which are easily changed, if required. A plywood cabinet base adds to the sturdy construction and long life of this great new game from Meadows.

LIGHTS—COLOR—ACTION

Color monitor overlay, explosive lights and fluorescent battleship reflect off a bright mirror backglass to create the feeling of "being there". With the lazer fuel pack loaded the players maneuver through a preselected maze to eliminate the enemy. Players can use strategy and move "fuel pack" to another tank to fight off an approaching enemy and protect his lines. Knocking out your opponents tanks "notches" the score and, with players trying to out-duel each other, the action gets frenzied as time races by.

FUTURISTIC SOUNDS—EXCITING GRAPHICS

The "never before heard" sound effects attract attention to the game when not in play, and add to the intense action during maneuvering for position. The multi-colored graphics have a hypnotic effect in attracting players to the game, and are eye appealing to any location.

FORGET ADJUSTMENTS

The monitor adjustments are set at the factory and should require no further tuning—no control adjustments—no meters—no tools—just plug it in and it's ready to play—no time consuming adjustments are necessary because we at Meadows are always thinking of you, the operators.
